This is the first time Faster cancer treatment has been reported as a health target.

Faster cancer treatment

The new target is 85 percent of patients receive their first cancer treatment (or other management) within 62 days of being referred with a high suspicion of cancer and a need to be seen within two weeks by July 2016, increasing to 90 percent by June 2017. Results cover those patients who received their first cancer treatment between July and December 2014.

Increased Immunisation

The national immunisation target is 95 percent of eight-month-olds have their primary course of immunisation at six weeks, three months and five months on time by December 2014. This quarterly progress result includes children who turned eight-months between October and December 2014 and who were fully immunised at that stage.
